Ecto Goggles Light & Sound Kit
GB Fans Kit Installation Instructions

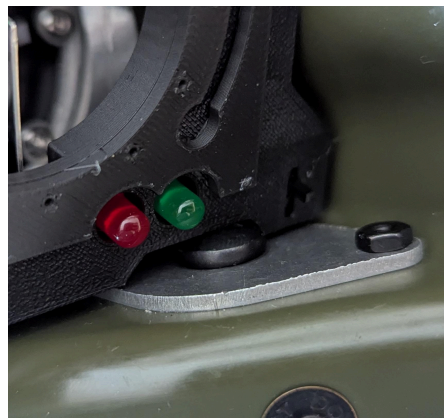

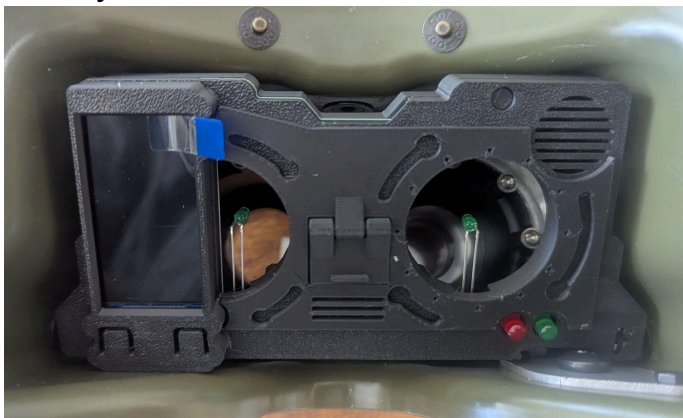

1. Remove any face padding from your goggles.
2. Remove the side knobs by unscrewing them entirely from the shell and internal aluminum plate. The internal plates may move loosely inside the shell when both side knobs are removed.

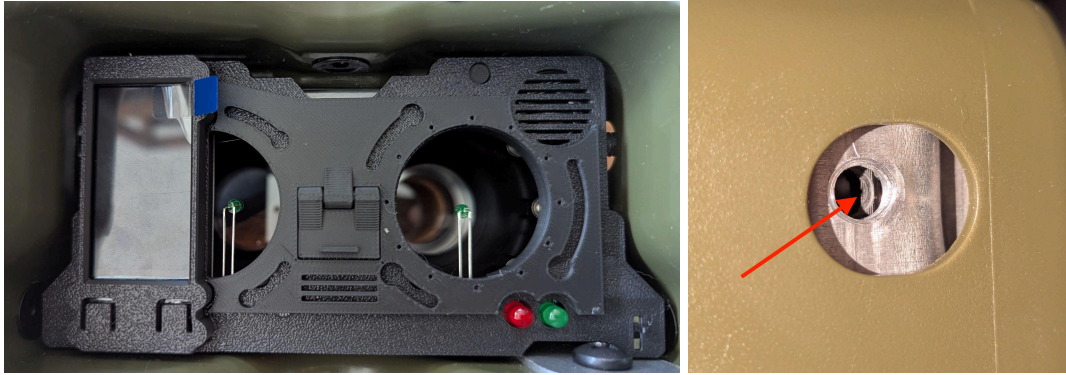

3. Identify the four internal protruding bolts with screws on the inside of the goggles. The 3d printed insert will fit over these.

4. Drop the assembled kit into the goggles at an angle so you are avoiding the external battery screw.

5. Once the insert is dropped in, line the side holes on the insert up with the side knob screw holes in the internal aluminum plate. Some slight pressure may be needed to line these side knob holes up.

6. When the side knob holes are lined up, screw the side knobs back into place and make sure the screw is threaded into the 3d printed insert as well. This will keep the insert and electronics in place.
7. If the side knobs are attached again, check the 3d printed insert and your electronics to make sure they are secure within the goggles frames by grabbing the middle of them and making sure there is no movement.

8. Check that your electronics work and replace your face padding.
